Name the logical fallacy

False dilemma

1. Briefly describe the character (the image of the fallacy)

A man depicting a man and a blue side one is normal the other disfigured with angel at the left and devil at the right

2. What connection can you see between the character and the fallacy?

The two face man is meant to be shown as only 2 meaning 2 choices left is depicted as good and other as bad tricking into only thinking there is only one right choice and one wrong false dilemma is only 2 choices in argument with those employing it usually leaving their as a better choice. This relates back to the connection in design as we can see two side of a man still the same person but with one side bad and other side good

3. Why is this character *wanted*?

Charges of collapsing argument with 2 choices and crime against nuance

4. What is the connection between the fallacy and the reason they are wanted?

Mentions the 2 choice with false dilemma only showing 2 choices as a way to force a corner and how it disallow a nuance

5. Where was the character last seen, or where do they like to hang out?

Extreme politics, online disagreements, religion debate, and relationship

6. Why would this fallacy be seen or found here?

Often in argument to sway masses it is used to force a 50 50 on the population to choose which one often used to force people to choose one thing over the other rather than find comprise

7. What is the reward for finding this fallacy?

Unused grey crayons

8. How does the reward relate to the fallacy?

Unused to show it is not biased and grey to show more than two choice

9. What are the strengths/weaknesses of the poster? (anything from their understanding of the fallacy, their creativity, or their poster design.)

It is strong in design of the characters, rewards, and attacks but the wanted for is lacking in my opinion i did wish it would relate more to real life charges but it does a good character to represent a simple to understand fallacy
